

Maryland is a leader in the global effort to diversify energy resources and curb greenhouse gas emissions through its State laws. Maryland has a goal to spur development of renewable energy through the Renewable Energy Portfolio Standard which aims to source 25% of electricity consumed in the State from renewable energy by 2020.

The Maryland Energy Administration (MEA) Offshore Wind Workforce Development Grant Program, for Fiscal Year 2019, will provide grant funding on a competitive basis to ensure Maryland has a ready and able workforce capable of contributing to the construction, installation, and operations and maintenance of an offshore wind energy project. This grant supports new offshore wind workforce training centers and training centers expanding into the offshore wind industry. MEA has requested \$800,000 be made available for the Offshore Wind Workforce Development Grant Program for FY 2019.

For more information on this grant visit MEA online:
Energy.Maryland.gov

Deadline:

12:00 pm (Noon), August 1, 2018. *Please note, applications received after this date will not be accepted.*

How to apply:

Submit Application Packages via email to:
wind.mea@maryland.gov

Paper applications should be mailed to:
