

Transportation Energy Grants

Through our transportation programs, the Maryland Energy Administration is able to help promote clean, efficient transportation for Maryland residents and businesses. The Maryland Energy Administration coordinates the Maryland Clean Cities Coalition which advances the State's economic, environmental, and energy security by supporting local actions to cut petroleum use in transportation.

Alternative Fuel Infrastructure Program: Assists in the development of public access, alternative fuel refilling/charging infrastructure in the state of Maryland.

Electric Vehicle Supply Equipment Rebate: Residents, governments and businesses can acquire rebates for purchasing and installing an electric vehicle charging station.

Plug-in Electric Vehicles Tax Credit: Residents and businesses can receive an excise tax credit on the purchase of a qualifying plug-in electric vehicle.

Public Compressed Natural Gas Fueling Station

A new, clean fueling option is now available to Maryland residents in Harford County, Love's Trillium Compressed Natural Gas (CNG) fueling station in Aberdeen, MD, is open to the public. The Maryland Energy Administration provided a \$500,000 funding to offset the construction and equipment cost for the station. The funding for the station came from Maryland Energy Administration's Natural Gas Refilling Station Grant Program which is designed to develop Maryland's natural gas refilling infrastructure. Although this grant has ended, the benefits of this CNG fueling station are significant for the State and diverting our reliance on traditional fossil fuels.

Nearby business, Frito-Lay, the anchor fleet for the station, received an \$80,000 Freedom Fleet Voucher Program grant from the Maryland Energy Administration to increase their green fleet of trucks.
