## FY22 Solar Technical Assistance Program Award Recipients

---

During Fiscal Year 2022 (FY22), the Maryland Energy Administration (MEA) agreed to provide solar siting assistance to 2 State and local government entities under the [Solar Technical Assistance Program](#). This program provides technical assistance to State and Local government agencies to evaluate the potential for, and to site, solar arrays on or around government buildings. Funding for these programs is made possible via the MEA Solar Technical Assistance Program which is funded by the [Strategic Energy Investment Fund](#).

**The City of Baltimore** will receive assistance to evaluate the roofs of 25 city buildings for solar suitability and preliminary sizing.

**The Housing Authority of Prince George's County** will receive assistance to evaluate the Cottage City Senior Citizens Housing building for suitability of solar on the roof of the apartment building. This project will also consider the development of a resiliency hub if the building design allows.

With an estimated value of **\$26K**, this assistance for these projects will be provided through the [Maryland Environmental Service](#) and its vetted subcontractors. Additional work and assistance will depend on the results of these studies.
